- **Backend** : Node.js, Express.js
- **Database**: MySQL &MongoDB
- **Version Control**: Git & GitHub
- **Other**: RESTful APIs & JSON
- **Soft Skills**: Problem-Solving, Communication (written & verbal) & Teamwork

---

PROJECT

---

1. [Restaurant Management System]

Developed the user interface (presentation layer) for a 3-tier restaurant management system, focusing on creating a user-friendly and efficient experience for both staff and customers.

- Technologies Used: React, HTML, CSS, JavaScript & Bootstrap.
- Contributions:

* Designed and implemented responsive UI components for order management, table reservations, menu display, and customer information.
* Implemented real-time order tracking for customers and staff, displaying the current status of each order("Order Received," "Prepering," "Ready," "Delivered").
* Focused on user experience by improving form usability, resulting in a 10% increase in order completion rates during user testing.
* Collaborated with the backend team to integrate RESTful APIs for user authentication and order management, ensuring secure data exchange between the frontend and backend.
* Faced the challenge of managing complex application state in React. Addressed this by implementing Redux for centralized state management, resulting in a more maintainable and predictable data flow.

INTERESTS

- Watching Football
- Watching Movies
- Cooking

DECLARATION

  I do here by declare that all the above information is true to the best of my knowledge and belief.
